ADVANCING HYGIENIC CLEANING

From alloy wheels
to new paint,
the
transport range can
handle it all!

Vikan Transport Range

The Multi-Purpose Brush
& the Alloy Wheel Brush

The Multi-Purpose Brush and the Alloy Wheel Brush

can handle the toughest grime while
protecting your vehicle's sensitive surfaces

The Multi-Purpose Brush

Item no: 524952

This all-around workhorse was designed with efficiency, effectiveness, and ergonomics in mind.

The curved handle, aided by easy-to-grip rubber, allows users to have a firm grasp on the brush, even while it's wet.

The rubber wraps around the front of the brush to protect delicate paint from being scratched.

The fine, soft, and dense bristle pattern can hold large quantities of water and chemical while being gentle on any surface.

The Multi-Purpose Hand Brush gently and efficiently cleans all vehicle surfaces. Durable and easy to clean, the brush can handle almost any job when it comes to vehicle cleaning.

Features:

- The brush body is made of heavy-duty solid black polypropylene. A black notch at the back of the brush helps prevent the brush from slipping out of the user's hands.
- Red rubber wraps around the front, sides, and the lower part of the handle to improve grip and prevent scratches on paint, stainless steel, or alloys.
- As a multi-purpose brush, it can be effectively used on glass, stainless steel, chrome, plastic, paint, and wheels. The long bristles get into the nooks and crannies of vehicles, making it an ideal choice for front grills, wheels, and vehicle bodies.
- The thin, straight bristle filaments are made of soft polyester and are dense enough to carry water and washing chemicals while being gentle on delicate surfaces.

Multi-Purpose Brush in action.

New features
& functionality
based on
industry
feedback

Features:

- The tubular brush shape reaches into wheel wells and tapers at the end to clean narrow gaps, too. Larger than our other wheel brush, this version is ideal for vehicles of all sizes, making quick work of any wheel cleaning challenge.
- Polyester bristles are strong enough to brush away grime, but soft enough to not scratch delicate surfaces. The shielded plastic wire, protective end cap, and soft bristles all work to protect wheels and paint jobs during the cleaning process.
- A black solid polypropylene handle securely holds twisted stainless steel wires and soft polyester bristles. The protective end cap and handle guard are also made of polypropylene plastic.

The Alloy Wheel Brush

Item no: 525652

Vikan's new Alloy Wheel Brush has been designed to meet many customer requests.

The soft bristles are gentle on surfaces, ensuring that they will not damage wheels. The brush's large diameter makes cleaning between wide-set wheel spokes more efficient. The shape of the brush makes it easy to reach all the way into wheel wells and the tapered end makes it easy to clean smaller areas, too. The brush has a shielded wire shaft that is flexible, yet safe to use near delicate surfaces. The Alloy Wheel Brush also has a protective end cap to protect your wheels, brake parts, and paint during the cleaning process.

The Vikan Alloy Wheel Brush can be used to clean all wheel types and it also works well for vehicle grills.
